Classes: 2Fl+ Ph Time: 2Hours

The 2nd English Examination

READING AND INTERPRETING

(15 pts)

Read the text carefully then do the activities.

The Amazon forest, in Brazil, is very important because it is considered as the lungs of the world. It covers five million square kilometers .It contains one third of the world's trees. However, the trees are disappearing.

By 1974, a quarter of the forest had already been cut down. In the following year, 4% of the remaining trees went. If the destruction of the forest continues at the same high rate, there will be nothing left by the year 2030. Scientists say that the disappearance of the trees is already causing changes in the climate. In Peru, there is less snow than before on the high mountains. In Bolivia, there is less rain than before and more wind. In some parts of north-east Brazil there is very little rain.

What will happen if more of the Amazon forest is cut down? According to climatologists, two things are likely to happen: There will be serious effects on the world's climate and the air that we breathe will lose some of its oxygen. If we lose tropical forests, the air will contain much less oxygen and much more carbon dioxide. It will become difficult to breathe.

With more dioxide carbon in the air, the temperature will rise; the ice-caps at the North and South Poles will melt; the sea level will rise and hundreds of seaside towns will be flooded. As a result, all scientists agree that if we destroy the Amazon forest, it will be an environmental suicide-like.

A. Comprehension / Interpretation:

1. Write the letter which corresponds to the right answer.

(1 pt)

a. an increase b. a decrease

B- All the scientists believe that it is a action to destroy the Amazon forest.

a. suicidal
